

## Microsoft Lens

Microsoft Lens is an amazing accessibility tool and a great way to capture notes and information from whiteboards, menus, signs, handwritten memos, or anything with a lot of text. You don't need to jot down notes, rely on blurry images, or worry about misplacing anything. It's great for capturing sketches, drawings and equations too, and even images without text. Office Lens gets rid of shadows and odd angles, so that images are easier to read. When used in the classroom, it can not only increase productivity, but also provide an intuitive and easy to use accessibility tool for increased access to all classroom content.
